PROFILE MANAGER FOR ECAMM 2.1 · WHAT'S NEW

Find the gigabytes your shows left behind.

See it. Check it. Clear it.

Every overlay, sound and scene you have ever added to Ecamm stays on your Mac, even after the show that used it is gone. Version 2.1 shows you **how much of your asset library your shows actually use**, and moves the rest to the Trash safely.

Version 2.1 · **free update** for every owner

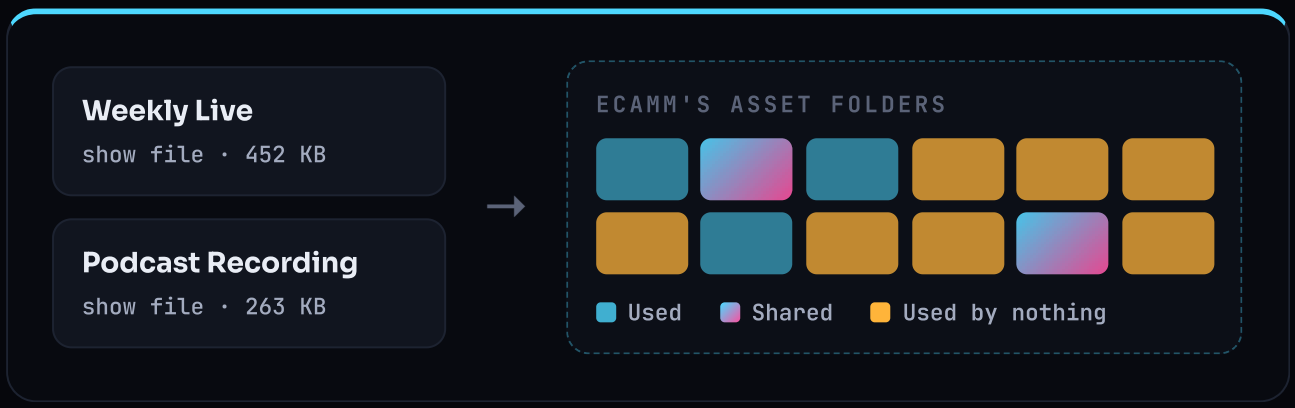
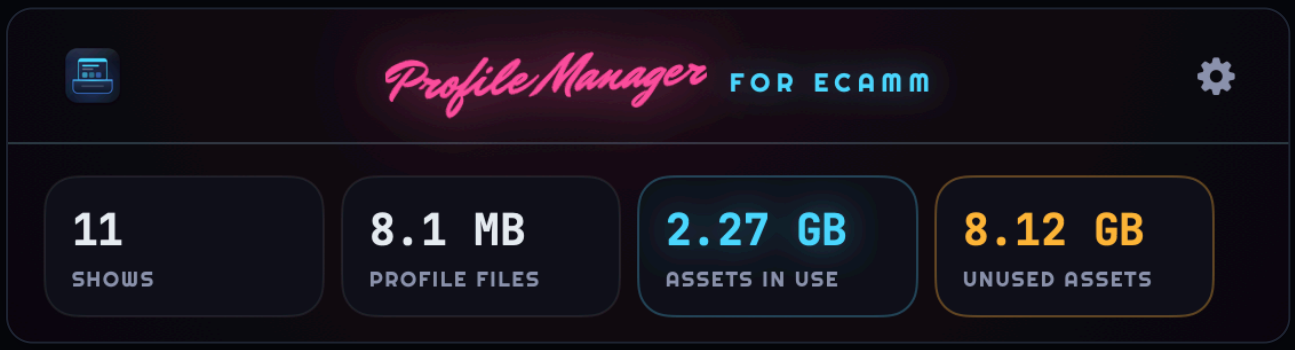
WHAT'S NEW

Your shows are small. Their assets are not.

A show in Ecamm does not contain its overlays and sounds. It points at them. The files live in shared folders, and one file can be used by several shows.



That is why a folder of small show files can sit on top of many gigabytes. Delete a show and its files stay behind. So the top of the Profiles tab now reports the two sizes separately:



SHOWS · PROFILE FILES
How many shows you have, and the size of the show files themselves.

ASSETS IN USE
Overlays, sounds and scene thumbnails that at least one show uses.

UNUSED ASSETS
Files no show uses. Click this tile to review them in the Library.

REPLACES LARGE FILES
The old tile counted big show files, which almost never exist.

NEW TAB

The Library.

Every file in Ecamm's asset folders in one list, with the shows that use it. Tap a folder in the summary to see only that folder.

IN USE
At least one show uses it. The row names the show. Always kept.

UNUSED
None of your shows mentions this file. Safe to clear.

NEW
Unused, but changed in the last 7 days. Left out of Select All in case a show you are building needs it.

KEPT
Ecamm's own files: LUTs and Ecamm's news images. Shown for the total, never offered for cleanup.

Use **Unused**, **In Use** and **All** to filter, sort by size or date, and click the magnifier on any row to see the file in Finder.

CLEARING SPACE

Clear it, safely.

Four steps. The app checks your shows again at the moment you confirm, so nothing a show uses can be moved.

1 **Quit Ecamm**

The show Ecamm has open can use files it has not saved yet. Cleanup stays locked until Ecamm is closed.

2 **Open the Library**

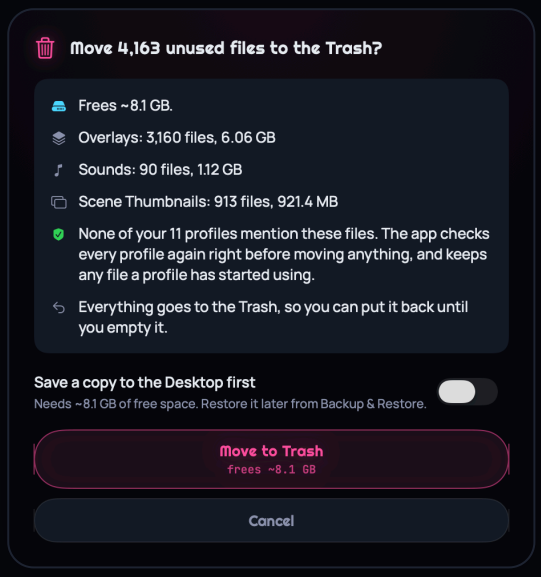
Click Unused Assets on the Profiles tab, or the Library tab at the bottom.

3 **Choose what to clear**

Tick files one by one, or press Select All Unused. Start with the largest files for the biggest win.

4 **Move to Trash**

Check the summary, decide on a Desktop copy, and confirm. Then open Ecamm again.



BUILT TO BE SAFE

A file counts as in use if its name appears **anywhere** in any of your shows. If any show cannot be read, cleanup is blocked, because nothing can be proven unused. Files that a show starts using before you confirm are skipped.

CHANGED YOUR MIND?

Everything goes to the Trash, so you can put it back until you empty it. If you saved a Desktop copy, **Backup & Restore** puts back any missing files and never overwrites one that is already there.

GETTING 2.1

In Profile Manager for Ecamm, choose **Check for Updates…** from the app menu. Your shows, settings and backups carry over.
